PTM: The mini chain may be cleaved by elastase.

SIMILARITY: Belongs to peptidase family S1.

SIMILARITY: Contains 2 CUB domains.

SIMILARITY: Contains 2 LDL-receptor class A dom

SIMILARITY: Contains 1 MAM domain.

SIMILARITY: Contains 1 SEA domain.

SIMILARITY: Contains 1 SECR domain.

                                                                                                                                     FUNCTION: Responsible for initiating activation of pancreatic proteolytic procenzymes (trypsin, chymotrypsin and carboxypeptidase A). It catalyzes the conversion of trypsinogen to trypsin which in turn activates other proenzymes including chymotrypsinogen, procarboxypeptidases, and proelastases.

CATALYTIC ACTIVITY: Selective cleavage of 6-Lys-|-Ile-7 bond in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPWQVSLHALGQGHICGASLISPNWLVSAAHCYIDDRGFRYSDPTQWTAFLGLHDQSQRS

PTM: The chains are derived from a single precursor cleaved by a trypsin-like protease.

SIMILARITY: Belongs to peptidase family S1.

SIMILARITY: Contains 2 CUB domains.

SIMILARITY: Contains 2 LDL-receptor class A domains.

SIMILARITY: Contains 1 MAM domain.

SIMILARITY: Contains 1 SEA domain.

SIMILARITY: Contains 1 SEA domain.

-!- SIMILARITY: Belongs to peptidase family S1.
-!- SIMILARITY: Contains 2 frizzled (FZ) domains.
-!- SIMILARITY: Contains 7 LDL-receptor class A domains.
-!- SIMILARITY: Contains 1 SRCR domain.
